## Instructions for Collecting Liquid Soil Amendment Samples

General tips to achieve accurate results:

- Wash hands thoroughly or put on latex gloves before handling material to be sampled. This step is particularly important if testing for E. coli in your amendment.
- Take sample only when it's possible to package and ship immediately.
- Keep samples cool but do not freeze. Freezing and thawing kills many beneficial microbes.
- Follow recommended sample delivery time frames.
- Helpful tools for taking liquid samples are clean one liter size plastic water bottles.

1. Take several small samples from the center of your brewer or container and mix them together. If possible, take samples while the brewer is running.

2. Pour about 10 oz or 300 ml of the mixture into a clean one liter plastic bottle. **Note that beverage residue can strongly skew biology test results, so use a clean bottle.** Save on shipping costs and only send the amount of liquid per sample listed here!

3. When using a 1 liter bottle the liquid should fill it 1/3 full of tea. If you use a 20oz bottle it should be half full of tea. **Important— beneficial organisms need oxygen! Do NOT fill any bottle to the top, but always leave about half the bottle full of air so that oxygen is available.**

4. To send, it is **important to use overnight shipping.** Tea is a fragile material which needs to be tested soon as possible due to the lack of aeration. Ship to: **Earthfort 635 SW Western Blvd Corvallis OR 97333.**

This test takes approximately 15 working days to complete and we do give recommendations as to what your amendment needs to be at optimum health. **Make sure you fill out and send a Testing Order Form with your sample. The Testing Order Form is available as a PDF at [www.earthfort.com](http://www.earthfort.com)** (click on Lab Services). On this form please include the email address where you would like the report sent.

Once you receive your report via email you can call and schedule a phone appointment to discuss the results and interpret the report, (additional consulting fees may apply.) We also offer a free, one hour webinar called, "Understanding Your Soil Biology Report" which you can find at our website under Education.

We look forward to doing business with you!
